

System Reef-resh: Optimal Dosing Instructions

System Reefresh™ is an innovative four-part system for true low-nutrient reef keeping. Harnessing the power of microbial activity, the system provides an elegant solution to excess nutrients in home aquaria. For best results, we recommend using these Optimal Dosing instructions. However for hobbyists with limited time for aquarium maintenance, we recommend the Convenience Dosing Instructions.

Part I: RF-Genesis

Use RF-Genesis once every day. Shake bottle before use. Using the pipette, dose RF-Genesis in an area of high flow.

The product can be dosed at any time of the day.

Dosage: Dose 1 drop of RF-Genesis for every 25 Gallons of aquarium volume.

Part II: RF Acids

Use RF-Acids once every evening. Using the pipette, dose RF-Acids in an area of high flow. Corals will have optimal absorption rates when dosed when the lights are turned off.

Dosage: Dose 1 drop of RF-Acids for every 25 Gallons of aquarium volume.

Part III: RF-Plus

Use RF-Plus once every evening. Shake bottle before use. Using the pipette, dose RF-Plus in an area of high flow. Corals will have optimal absorption rates when dosed when the lights are turned **off**. Turn off skimmer for 30 minutes after dosing.

Dosage: Dose 1 drop of RF-Plus for every 25 Gallons of aquarium volume.

Part IV: RF-Fuel

Dosage: Refer to the chart below and determine how many mL of RF-Fuel to dose every day.

- Gently squeeze the lower container until the upper container is about half full of fluid.
- Using the syringe, extract the appropriate amount of RF-Fuel into the syringe. (There will be a small amount of air in the syringe. This is normal)
- Dose the RF-Fuel by emptying the contents of the syringe in an area of high flow.
- RF-Fuel is most efficiently used by bacteria when dosed at the start of the photoperiod.

Stage Daily Dose per 25G

Week 1	0.3 mL
Week 2	0.3 mL
Week 3	0.4 mL
Week 4	0.4 mL
Week 5	0.5 mL
Week 5+	0.5 mL
